- (54) METHODE DE REGLAGE DE L'ALIMENTATION EN REACTANTS DE BLANCHIMENT AFIN D'OBTENIR UN POURCENTAGE SUBSTANTIELLEMENT CONSTANT DE DELIGNIFICATION POUR LA DUREE DU PREMIER STADE DE BLANCHIMENT/DELIGNIFICATION
- (54) METHOD FOR CONTROLLING THE ADDITION OF BLEACHING REAGENTS TO OBTAIN A SUBSTANTIALLY CONSTANT PERCENTAGE OF PULP DELIGNIFICATION ACROSS THE FIRST BLEACHING/DELIGNIFYING STAGE

(57)

The present application describes a method for controlling the addition of bleaching/delignifying reagents to obtain a substantially constant percentage of pulp delignification across the first bleaching stage. The present method allows substantial improvements in bleached pulp quality through proper addition of the bleaching/delignifying reagent flow rate. The efficiency of the bleaching/delignifying reagent is therefore greatly improved. Further, reduction of pulp off-grades, equipment corrosion and effluent loading are additional beneficial effects resulting from the present invention.
